

Exercise 1:

Notation:

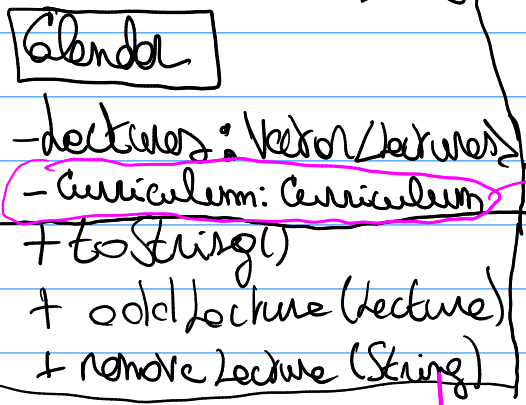

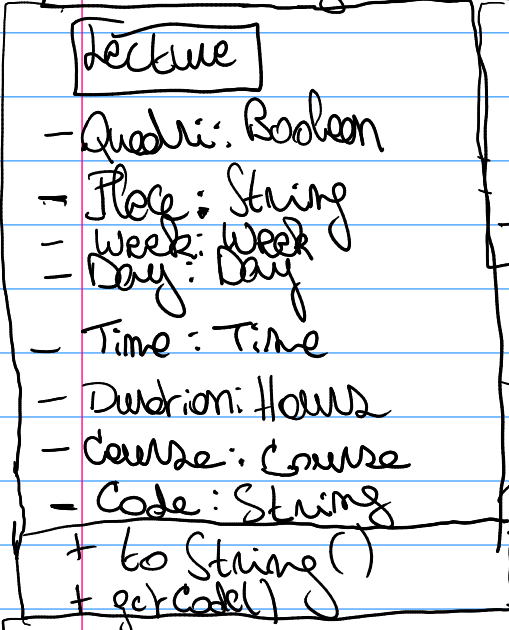

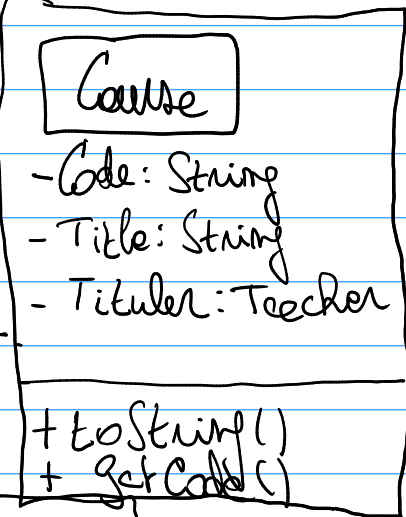

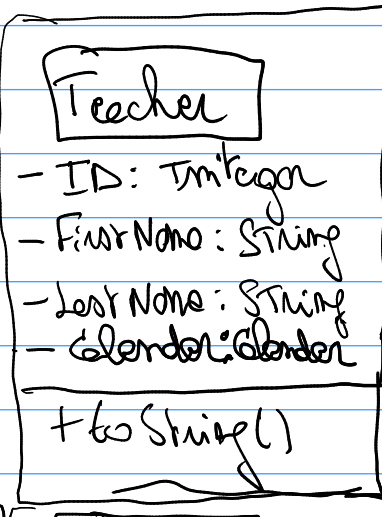

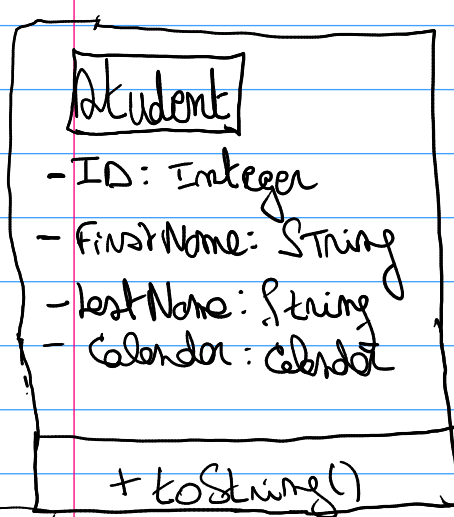

+ : public element: access from every class

- : private element: access from its own class

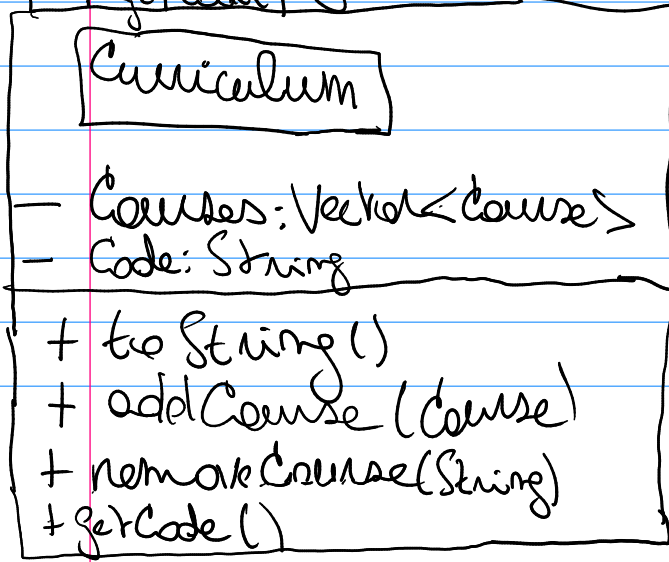

instance variable: individual to each instance

class variable: shared between all instances

check Note (*)

↳ corresponds to class variable

Note: There are several ways to describe the situations. In particular, I've supposed that it was possible that lectures of a given lecture can have different durations, places from one week to another one.

* The program Study is supposed to be unique (one for ULiège)

(*) : The Curriculum Variable is there to check whether a lecture can be added with respect to the curriculum: i.e.: The lecture's course is in the Curriculum.

Typical Scenario: Number of instances of class:

Student: # Students

Teacher: # Teachers

Course: # Courses

Lectures: $\sum_i p_i$ $N = \# \text{ Courses}$
 $p_i = \# \text{ Lectures of Course } i$

Calendar: } # Calendars = # Curriculum
Curriculum: }
Study Program: 1
